SUMMARY

AI Engineer / AI Developer with 1 year of professional experience in data-focused work and applied AI product development. Experienced in Python, LangGraph, Agentic AI, RAG, MCP, LLM applications, retrieval pipelines, tool calling, and stateful agent workflows. Focused on building reliable, evidence-grounded AI systems.

SKILLS

Programming Languages: Python, SQL
Frameworks and Libraries: LangGraph, LangChain, Hugging Face Transformers, FastAPI, Pandas, NumPy
AI & Agentic Systems: Agentic AI, RAG, Tool Calling, Agentic Workflows, MCP
Retrieval & Search: Embeddings, Semantic Search, Keyword Search, Hybrid Search, Reranking, Query Rewriting
Databases & Vector Stores: PostgreSQL, ChromaDB

WORK EXPERIENCE

CompetitivIA Aug 2025 - Jul 2026
Data Scientist

- Contributed to **data processing, data pipelines, and predictive workflows** across internal product development.
- Supported **AI-assisted components** involving **scoring, analysis, recommendations, and structured outputs**.
- Contributed to workflows combining **data ingestion, preprocessing, deterministic analysis, and LLM-assisted generation**.
- Supported **reliability** and **integration readiness** through **validation, fallback logic, documentation, and implementation**.
- Collaborated within a **remote, multicultural team** as responsibilities expanded from **data-focused work into applied AI**.

PROJECTS

ResearchLens [GitHub Repository](#) Aug 2026

- Developed **ResearchLens**, an adaptive technical research assistant using **LangGraph** to route between indexed documentation and live web search.
- Combined **semantic search, keyword search, reranking, query rewriting, and corrective retrieval** to improve evidence quality before generating answers.
- Generated **cited, grounded responses** with retrieval grading, **faithfulness checks, and usefulness evaluation**.
- Used **LangSmith** for workflow tracing and evaluation.

IssueTrace [GitHub Repository](#) Aug 2026

- Developed **IssueTrace**, an **evidence-grounded, stateful AI agent** using **LangGraph** to investigate public GitHub issues against historical repository versions.
- Built a shared-state workflow with **specialized reasoning, auditing, tool-execution, and Human-in-the-Loop nodes** for issue triage, repository inspection, root-cause analysis, and fix planning.
- Enforced an evidence-first approach where search results remain discovery candidates until relevant files are inspected, then produced **audited fix plans** from verified repository evidence.
- Enabled **human-approved constrained patch generation**, code-change validation, controlled testing in isolated repository workspaces, and safe termination when evidence is insufficient.

EDUCATION

B.Tech in Electronics and Communication Engineering 2020 - 2024
Tezpur University
